Q. What is an Anonymous function?

Ans A function without a name is called anonymous function.

Q. What are first class functions?

Q. Difference b/w function statement & function expression?

| function statement :- | function Expression |
| --- | --- |
| function a(){<br>console.log("a is called");<br>} | var b = function(){<br>console.log("b called");<br>} |

↳ Diff. b/w $f^n$ expression & $f^n$ statement is hoisting. i.e. in function statement we can call the function before initializing it but in function expression we can not call the function before initializing because ~~it will store~~ b is treated by any other variable. It is assigned 'undefined' initially
